Ophthalmology at the University of Tartu (n = 242, 86% response rate). Each participant was asked to rate their experience in the following 5 categories: (1) irritation during surgery, (2) visual difficulties during surgery, (3) postoperative eye pain, (4) the effect of surgery on lifestyle, and (5) on their overall postoperative experience. They were also asked to rate overall satisfaction with the surgery. Total scores in the irritation and visual difficulties categories were significantly higher in phacoemulsification procedures than in other surgical methods. The overall experience was significantly better in the phacoemulsification group than in the other procedures (P f678ea9f9e
